COMPANY ACTIVITY UPDATE

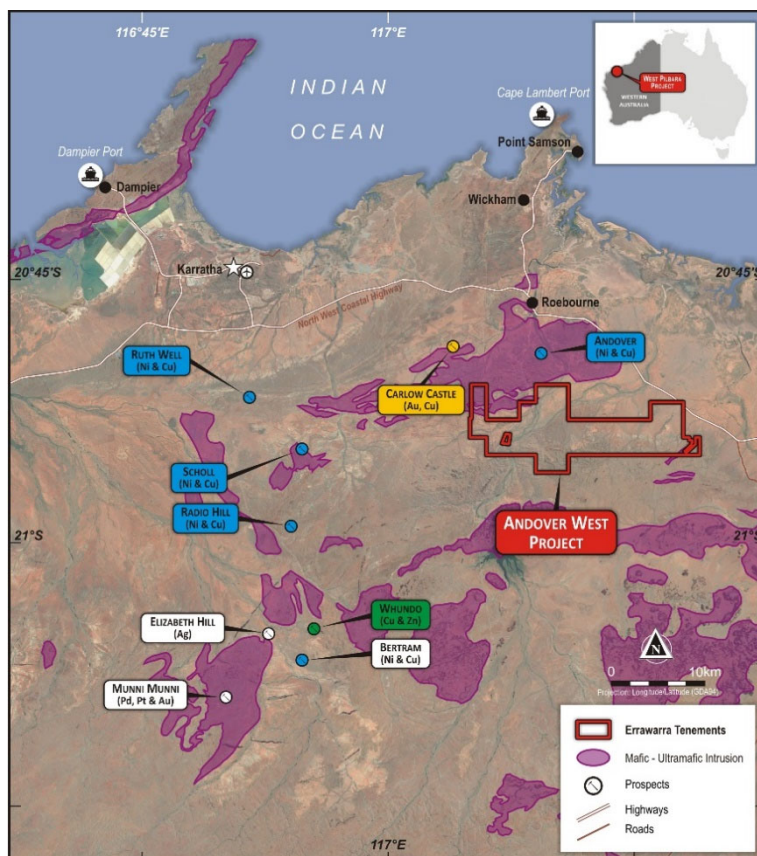

Errawarra Resources Ltd (ASX:ERW) (**Errawarra** or the **Company**) is pleased to provide this update to shareholders on its Andover West activities.

ANDOVER WEST PROJECT

The Company advises that the Fixed Loop electromagnetic (**FLEM**) survey scheduled to take place at the Andover West prospect has now been completed and interpretation of the survey data is being undertaken by the Company's technical consultants.

The ground surveys were completed over the three priority targets interpreted from an historic airborne VTEM (variable time-domain electromagnetic) survey. The FLEM data will allow better geospatial modelling of these VTEM anomalies and enable the planning of drill holes to test the targets.

A track and drill pad heritage survey is scheduled to commence on 29 November which when completed, will clear the way for the finalisation of plans to undertake a diamond core drill program. The drilling program which will initially comprise 3 holes and up to 750m will be subject to DHEM surveys on completion which may potentially result in the undertaking of additional drill holes.

Recent results from Azure Minerals Ltd's drilling at its Ridgeline prospect included a highest grade to date of 18.2m @ 1.93% Ni, 0.65% Cu & 0.08% Co from 508.2m¹. The Company is encouraged by this given its proximity to the Andover West priority drill targets which are situated ~1.8km from Azure's discovery.
